

SERVICE BRIEF

Cloud IT Solutions

Eliminate expensive startup costs and IT management overhead with enterprise-level cloud solutions.

Welcome to the Future of Technology Management

Cloud IT is a cost-effective solution that greatly reduces the cost of setup and management.

Imagine being able to expand your company's capabilities without needing to purchase expensive hardware or worry about running and maintaining it in your office. With the cloud, you can take advantage of secure, fully-hosted data centers without the cost of running your own.

All of your servers and solutions are housed within FRS Pros's secure, off-site data center, greatly reducing the cost of management and maintenance.

Hosted Virtualized Cloud Servers

Deploy, manage, and maintain your company's server environment in our data center.

Running a business used to require expensive server equipment that needed to be replaced every few years. With COMANYNAME's Cloud Management solution, your server is housed securely and maintained by our experienced technicians and engineers. We take advantage of virtualized server environments so you get the most out of your technology. This results in far less resource and energy consumption, meaning it's friendly for both the environment *and* your budget.

Internally, your users will be able to access files and applications hosted on your virtual servers as if they were physically at your location. FRS Pros

employs the highest standards of IT management in our data centers to ensure optimal uptime, data protection, and continuity. This helps your business to not worry about your IT and concentrate on daily operations.

Hosted IT Solutions

Get enterprise-level IT solutions for affordable small business prices.

With FRS Pros's Cloud Management solution, your business can improve your day-to-day operations without the astronomical startup costs that come with changes to your IT infrastructure. Be sure to ask us about our other cloud solutions, including:
